DEEP DIVES

Show HN: Made an open-source Lego AI generator

HN

Hi there :-) New on HN, first time posting. Past year, around December, I started experimenting with making ChatGPT and Claude generate source code in LDraw language. This LDraw is literally an "assembly" language, a low-level programming language that describes how to assemble LEGO pieces together

Why it matters. Flagged by the ranking heuristics as a real, artifact-backed build.

WHAT PEOPLE ACTUALLY BUILT

Show HN: I’m color blind, so I built a way to show people how I see

Show HN

I'm color blind and for as long as I can remember, the first question people always ask me after finding out is: "what color is this?" So I thought it could be cool to build a color blind simulator where I can point my phone's camera at anything and show people live what it looks

https://www.josh.ing/howisee

Guys, I created WaterSheep, an open-source alternative to Jev

r/LLMDevs

WaterSheep is an open-source model that answers questions written in plain text (yes/no, single choice, rating and multi-label) and gives a probability for every option, like a classification model. Last Saturday I woke up, saw YouTubers hyping up Jev, and thought: wait, I can bu

I made my own cybersecurity benchmark and ran Qwen3.8 27B, here's how a local model actually does at hacking

r/LocalLLaMA

Hey local AI community, I've been working on this for a while and finally feel ok sharing it. It's a cyber benchmark where the model gets a shell in an isolated docker box and has to find the exact flag. Pwn, web, crypto, rev, forensics, a few real CVEs and some multi-stage range
